

## Precision Immuno-Oncology for advanced NSCLC patients treated with PD(L)1 immune checkpoint inhibitors (ICIs)

An analysis of the first 100 pts from the **PIONeer Project**

**Fabrice Barlesi, MD, PhD**

**On behalf of the PIONeer consortium**

Aix Marseille University, CNRS, INSERM, CRCM, Marseille, France

Gustave Roussy Cancer Campus, Villejuif, France

## **Personal financial interests:**

Astra-Zeneca, Bayer, Bristol-Myers Squibb, Boehringer–Ingelheim, Eli Lilly Oncology, F. Hoffmann–La Roche Ltd, Novartis, Merck, Mirati, MSD, Pierre Fabre, Pfizer, Seattle Genetics and Takeda

## **Institutional financial interests:**

Abbvie, ACEA, Amgen, Astra-Zeneca, Bayer, Bristol-Myers Squibb, Boehringer–Ingelheim, Eisai, Eli Lilly Oncology, F. Hoffmann–La Roche Ltd, Genentech, Ipsen, Ignyta, Innate Pharma, Loxo, Novartis, Medimmune, Merck, Mirati, MSD, Pierre Fabre, Pfizer, Sanofi-Aventis and Takeda

## **Non-financial interests:**

Principal Investigator for Astra-Zeneca, BMS, Merck, Pierre Fabre and F. Hoffmann-La Roche, Ltd, sponsored trials (or ISR)

# PIONeeR

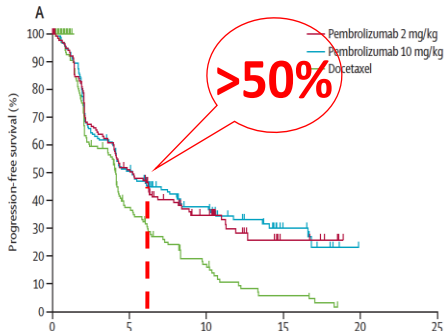

Background, Rational & Objectives

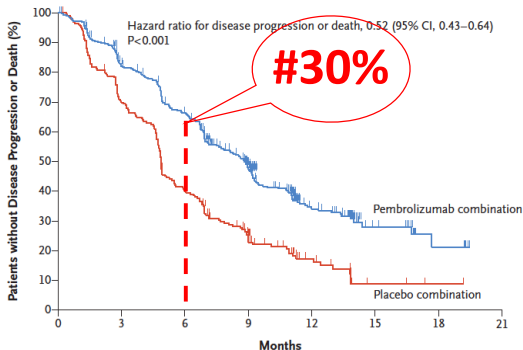

# PD-(L)1i in 1<sup>st</sup> & 2<sup>nd</sup> line for advanced NSCLC pts

Long-term benefit is the goal but primary resistance occur w/o available predictive biomarker(s)

Ex. Pembrolizumab 2<sup>nd</sup> line in advanced NSCLC  
(Herbst R, et al. Lancet 2015)

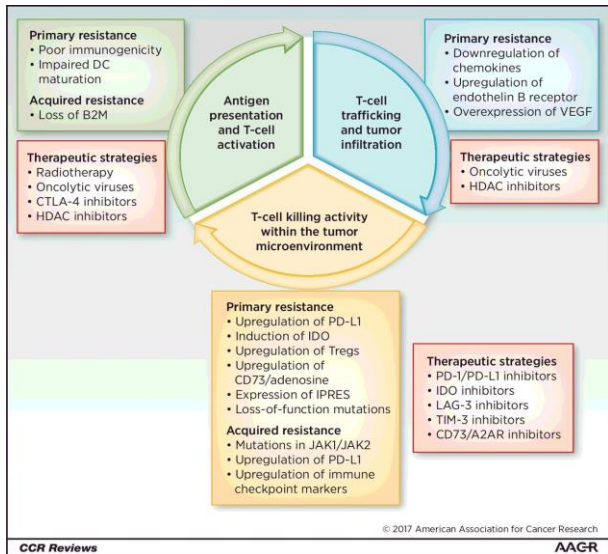

Ex. Pembrolizumab with chemotherapy 1<sup>st</sup> line line in advanced NSCLC (Ghandi L, et al. NEJM 2018)

KN010 and KN189 studies have been chosen to illustrate the rationale and data are comparable with other types of PD-(L)1 inhibitors alone or in combination with chemotherapy

# PD-(L)1i in 1<sup>st</sup> & 2<sup>nd</sup> line for advanced NSCLC pts

## Proposed mechanisms of resistance

## Distribution in advanced NSCLC?

- ▶ IO naive (primary resistances)?
- ▶ IO pretreated (secondary resistances)?

## Predictive value for efficacy of next generation IO drugs?

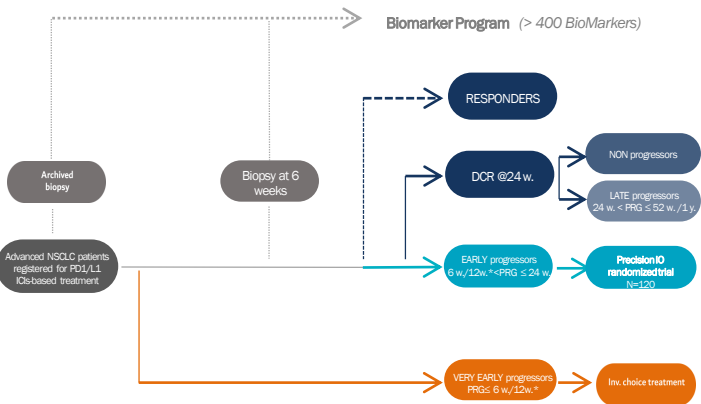

# The PIONeer project

Understand, Predict and Overcome resistances to PD-(L)1i in adv. NCSLC pts

**Understand and Predict:** PIONeer biomarkers trial

**Overcome:** PIONeer umbrella trial

\* Amendment expected on Q4 2020

- ➔ NKG2A inhibitor (Monalizumab) + Durvalumab (N=30)
- ➔ CD73 inhibitor (MEDI9447) + Durvalumab (N=30)
- ➔ ATR inhibitor (AZD6738) + Durvalumab (N=30)
- ➔ Stat3 inhibitor\* (AZD9150) + Durvalumab (N=30)
- ➔ Control arm Docetaxel monotherapy (N=30)

## Design and Flow Chart

\* Related to 1st line IT+CT

\*\* Based on RECIST v1.1, irrespective of the study period

\*\*\* Including 3 Very Early Progressors, with a radiologic progression (inclusion in clinical trial)

# PIONeeR Biomarker program

> 400 biomarker data planned at VS & 6W – 123 analyzed VS for at least 33 pts

 Testing initiated  
 Data available  
 To be initiated

### Immune cells infiltration

-  - Mplx IHC, incl. CD3/CD8 cell densities
-  - Mplx IHC, incl. Monocytes, Granulocytes, Neutrophils
-  - Mplx Innate Immunity

### Drug response

-  - PK/PD modelling from longitudinal data

### Sensitivity to immune effectors

-  - Immune gene expression signatures

### Peripheral markers

-  - Circulating immune cells
-  - Soluble markers
-  - Endothelial markers
-  - ctDNA
-  - Microbiome

CD3

### Immune checkpoints

-  - Immunoscore® IC PD-L1/CD8
-  - Mplx TCE: CD3/CD8/PD1/TIM3/LAG3

### Tumor foreignness

-  - TMB
-  - T-cell clonality

### Immune suppression

-  - Treg – CD4/FOXP3
-  - Mplx PMN-MDSC / Mononuclear MDSC

## Statistical Analyses

### Endpoints and statistical methods

- Overall response: binary endpoint, odds ratios (and their 95% CI) estimated using Firth's penalized maximum likelihood logistic regression
- Progression-free and Overall survival: time-to-event endpoint, hazard ratios (and their 95% CI) estimated using Firth's penalized maximum likelihood Cox regression

### Exploratory analyses

- In the case of a continuous biomarker with a statistically significant impact on PFS or OS in multivariate analysis, a cutoff value was determined using a widespread and straightforward method to select a cutoff value that minimizes the P-value

### R software version 3.6.0

# PIONeeR Biomarkers

Results on the first 100 patients included

# PIONeeR Biomarkers: First 100 patients analysis

## Baseline Patients' demographics

		N - %* (* Same number as n=100)
Sex	Male / Female	64 / 36
Age	<70yrs / ≥70yrs	69 / 31
ECOG PS	0-1 / 2-3	96 / 3
Histology	Adenocarcinoma (w oncogene driver / w KRASm)	57 (9 / 28)
	Squamous Cell C.	18
	Others/Unknown	25
Smoking history	Never / Former	8 / 49
	Current	40
Line of PD-(L)1 therapy	1st line / 2 <sup>nd</sup> line	3 / 87
	3rd line or more	10
Type of PD-(L)1 drug received	Pembrolizumab (alone/w chemo)	34/4
	Nivolumab	36
	Atezolizumab	26

# PIONeeR Biomarkers: First 100 patients analysis

## Outcomes (ITT population)

Median length of follow-up: **6.55 months** (range 0.01 – 26.15)

**Overall Response Rate: 13%** (95%CI 7.1% – 21.2%)

**Median PFS (71 events): 3.0 m** (95%CI 2.4 – 4.8)

**Median OS (44 events): 11.0 m** (95%CI 8.2 – NR)

# PIONeeR Biomarkers: First 100 patients analysis

## Clinical Characteristics<sup>§</sup> & Biomarkers associated with Objective Response

Timepoint	Biomarker	Non-Responders		Responders		P-value
		N valid	Mean	N valid	Mean	
Pre-treatment	PD-L1+ tumor cell percentage*	70	14%	11	33%	<b>0,045</b>
	Cytotoxic T cells CD3+/CD8+ density in the Tumor	43	298 cells/mm <sup>2</sup>	7	383 cells/mm <sup>2</sup>	<b>0,041</b>
	Cytotoxic T cells at TSI (Tumor-Stroma Interface)	26	178 cells/mm <sup>2</sup>	4	511 cells/mm <sup>2</sup>	<b>0,041**</b>
	Effective T cell density in the Tumor	43	116 cells/mm <sup>2</sup>	7	172 cells/mm <sup>2</sup>	<b>0,008</b>
	Regulatory T-cell density in the Stroma	49	18 cells/mm <sup>2</sup>	7	70 cells/mm <sup>2</sup>	<b>0,010</b>
	Tissue factor blood concentration (endothelial activation)	28	21,6 fM	6	8,8 fM	<b>0,046</b>
6 weeks	Neutrophils in the Stroma	9	16 cells/mm <sup>2</sup>	2	73 cells/mm <sup>2</sup>	<b>0,036</b>

<sup>§</sup>, Sex, age, ECOG PS, Histological subtypes, Smoking status, line of therapy and type of PD-(L)1 drug were not found to significantly influence the likelihood of response; \* PD-L1 TC expression (<1% vs ≥1%) was significant in multivariate analysis, HR: 4,1 [1,3;14]; \*\* p-value F-test

# PIONeeR Biomarkers: First 100 patients analysis

## Clinical Characteristics associated with Progression Free & Overall Survival

	Median PFS (months)	HR (95%CI), <i>p</i> -value
ECOG PS (2/3 vs 0/1)*	1,22 [0,49;NA] vs 3,22 [2,53;5,32]	10.8 [2.9 – 30.4], <i>p</i> =0.002
Histological Subtype (Others vs ADC)	1,51 [1,35;3,45] vs 4,63 [2,53;11,20]	2.24 [1.3 – 3.9], <i>p</i> =0.007
Type of PD-(L)1i (Pembro. vs Nivo.)	3,22 [1,77;NA] vs 2,56 [1,54;4,07]	0.58 [0.34 – 1.0], <i>p</i> =0.049
PD-L1 TC expression (<1% vs ≥1%)*	2,25 [1,58;3,71] vs 6,60 [2,99;NA]	2.0 [1.2 – 3.5], <i>p</i> =0.004

	Median OS (months)	HR (95%CI), <i>p</i> -value
ECOG PS (2/3 vs 0/1)*	3,09 [0,49;NA] vs 12,78 [8,31;NA]	3.9 [1.1 – 10.3], <i>p</i> =0.041

Sex, age, Smoking status, and line of therapy were not found to significantly influence the risk of progression; \* Significant in multivariate analysis

# PIONeeR Biomarkers: First 100 patients analysis

## Biomarkers associated with Progression Free & Overall Survival

	Hazard Ratio PFS [95% IC]	p-value
PD-L1 expression in TC (%) *	0,98 [0,96;0,99]	0,0209
Circulating Activated T cells * **	1,06 [1,02;1,10]	0,0008
Serum IL6 *	1,00 [1,00;1,01]	0,047
Cytotoxic T cells in the tumor **	1,00 [1,00;1,01]	0,047

	Hazard Ratio OS [95% IC]	p-value
Circulating T cells *	0,99 [0,99;0,99]	0,039
Circulating Activated T cells *	1,07 [1,03;1,12]	0,001
Serum IL6 *	1,00 [1,00;1,01]	0,037
Serum TNFα *	1,04 [1,01;1,09]	0,031

\* Multivariate analysis stratified on Sex, Age, ECOG PS, Histology, Smoking history, Line of PD-(L)1 therapy, Type of PD-(L)1 drug received, PDL1 1%; \*\* Multivariate analysis stratified on Sex, Age, ECOG PS, Histology, Smoking history, PDL1 1%

# PIONeeR Biomarkers: First 100 patients analysis

## PK/PD modelling preliminary results

- Large inter-patient variability on both peak levels and through levels

- Identification of individual PK parameters and PK/PD modeling (ongoing)
- Identification of outlier patients with trough levels below the required threshold for target engagement

5 PD patients despite adequate cell density

2 assayed for nivolumab trough levels

Both showed nivolumab trough levels **below** the threshold associated with efficacy

## PIONeeR Biomarkers: First 100 patients analysis

Evolution of immune profile before and 6 weeks after PD-(L)1 treatment

Marker	N valid	Log2 Fold Change	V1 Mean	V2 Mean	P-value
PD-L1+ cell density in the tumor	21	<b>2,4</b>	219	548	<i>0,002</i>
Cytotoxic Tcells density in the tumor	21	<b>1,4</b>	310	952	<i>0,007</i>
CD8+-PD-L1+ cells proximity index in the tumor	21	<b>2,1</b>	6,3	42,8	<i>0,0009</i>
Regulatory Tcells in tumor parenchyma	21	<b>1,6</b>	32	75	<i>0,002</i>
Regulatory Tcells in the stroma	17	<b>1,7</b>	24	97	<i>0,01</i>
Exhausted T cells in the tumor	12	<b>2,3</b>	34	238	<i>0,004</i>

# PIONeeR Biomarkers: First 100 patients analysis

Lymphocytes infiltration increases after treatment.

## Exhausted Tcells

CD3+ CD8+ PD1+ LAG3+ TIM3+

## Tregs in Parenchyma

CD4+ FOXP3+

# PIONeeR Biomarkers: First 100 patients analysis

## Conclusions

PIONeeR biomarkers is the **first and the largest** study to provide with >400 biomarkers assessed in advanced NSCLC treated with PD-(L)1 inhibitors in monotherapy or in combination with chemotherapy

Some **clinical** factors predicted the outcomes on PD-(L)1 inhibitors

- **ECOG PS** remains the strongest to predict OS

**Biomarkers** are therefore mandatory and PIONeeR suggested a predictive value for:

- PDL1 tumor expression, with **PDL1 positive cell density** possibly superior
- Density of **Cytotoxic T cells** in the tumor
- Density of Immunosuppressive cells: **Treg**, MDSC

The study is still **ongoing** and additional patients as well as analyses will provide with additional data in order to design an '**immunogram**' helping to drive the IO management of advanced NSCLC
